

# A look at Laurel's airport development

LAUREL has a nice new look for those who fly. A paved runway from southwest to northeast, lights, and new hanger and commercial areas under development. Lighting of the airport was done by local people who donated money and labor. The picture at top shows the field as it now appears. At extreme left is a typical approach to the old runway, an approach most pilots did not like. Below that is a pilot's view of the new runway as he puts down. In the center picture Jake Stahley, pilot and airport manager, shows it is not all flying as he works on the books. Above Dr. John Smith and Dave Powers discuss a route, a part of the preplanning for any flight. On the facing page is a picture of Guy Stormont, machine shop operator and manufacturer who uses his plane in his business.
